

1

NEAR TERM

Evaluation, Safety,
Environment Scaling

~2-3
YEARS

2

MEDIUM TERM

Native 3D &
Federated Learning

~3-5
YEARS

3

LONG TERM

Embodied & Self-Evolving
Ecosystems

Contamination-
Resistant
Benchmarks

Robust, leakage-
resistant benchmarks
for reliable evaluation
across modalities and
domains.

Safety
Guardrails

Safety-first guardrails
with uncertainty
estimation, refusal
mechanisms, and
human oversight.

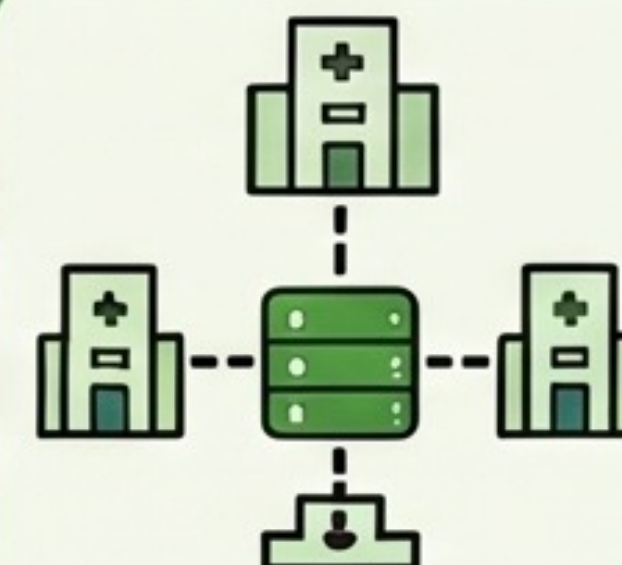

Clinical
Gyms

Realistic simulators
and environment
scaling for rigorous
preclinical training
and stress testing.

Native 3D
Reasoning

True volumetric
understanding
and reasoning
across 3D medical
imaging data.

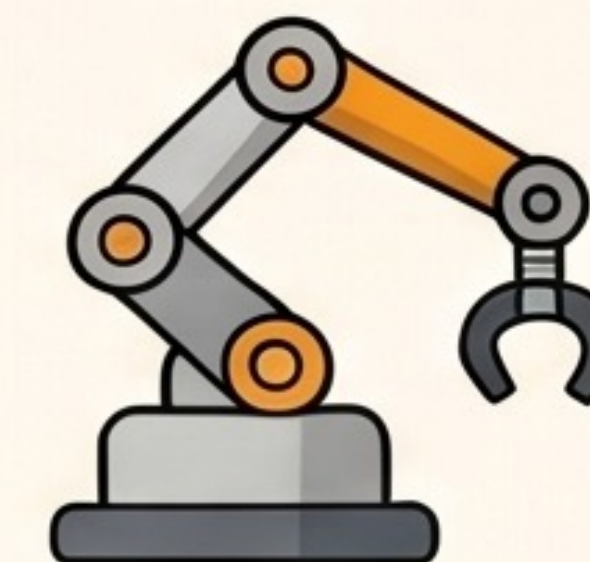

Federated
Training

Privacy-preserving
federated learning
across institutions
without centralizing
patient data.

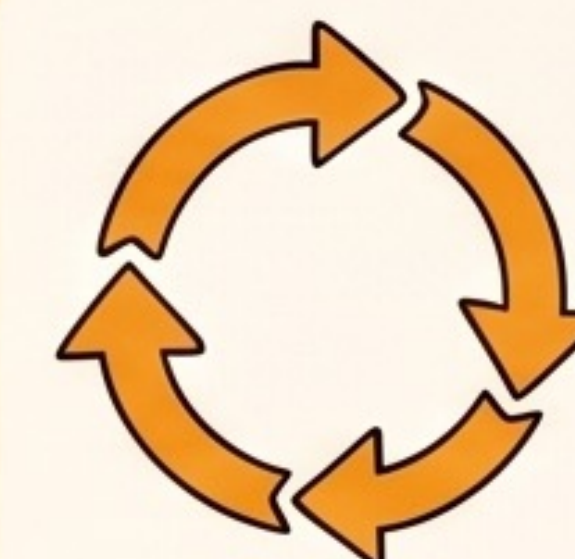

Multi-Site
Generalization

Strong generalization
across scanners,
populations, and care
settings worldwide.

Embodied
Agents

Agents that
perceive, plan, and
act in the physical
world to assist
clinical workflows.

Self-Evolving
Ecosystem

Closed-loop system
that learns, evaluates,
and improves itself
continuously.

Continual Clinical
Adaptation

Continual adaptation
to new data, practices,
and emerging clinical
needs over time.
